LARGE METAL SCANNER CART W/ STATIC CHILD SEAT

Perfect for large retailers looking to increase shopping capacity. Heavy-duty oval frame allows for a greater weight carrying capacity and significantly less maintenance.

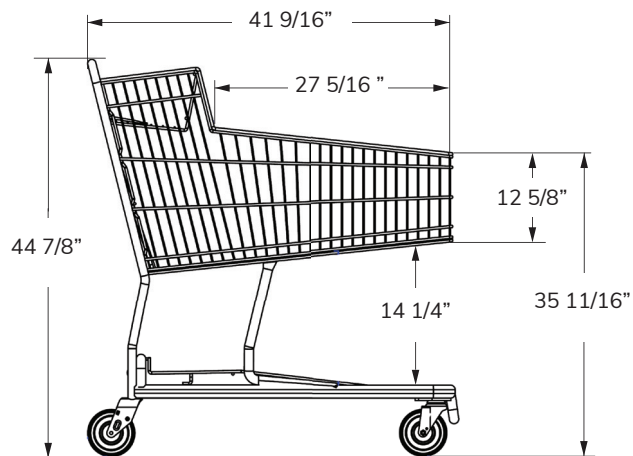

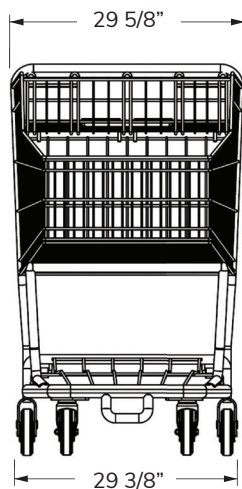

The static child seat creates additional carrying capacity while eliminating the moving parts of traditional child gate assemblies. This leads to a longer life expectancy with less maintenance. Child restraints do not get tangled in nested carts, creating less cart sticking problems or damage to child restraints.

The **newly engineered gate design** is substantially stronger, ensuring that the swinging gate assembly doesn't bend or fail under heavy use.

Our patent-pending **Roller Lift System** was designed and engineered to avoid the most common caster lift failures, extending the life of the lift and the cart's wheels.

The strategic placement of a **rear brace bar** was designed to prevent customer shin bruising, a common occurrence caused by abrupt stops with cart containment systems.
